Based in Nigeria (WAT, UTC+1) • Seeking remote roles; open to relocation • Available immediately

SUMMARY

Frontend developer working in React, TypeScript and JavaScript, currently shipping production features at The Comforters House Global. Built four complete web apps (learning platform, e-commerce storefront, job tracker, analytics dashboard), each with a live demo and public source code, and rebuilt all four in React and TypeScript with 186 automated tests. Seeking a remote frontend role on a product team.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, JavaScript (ES2023), React 19, HTML5, CSS3
State & Data: useReducer and Context, React Router, REST APIs, React Hook Form and Zod, LocalStorage, Chart.js
UI & Design: Responsive/mobile-first design, accessibility, CSS animation, Figma
Testing & Tooling: Vitest, React Testing Library, Git & GitHub, Vite, Vercel, Chrome DevTools, Lighthouse

EXPERIENCE

Frontend Developer — The Comforters House Global — March 2026 – Present

- Build and maintain frontend features for organisational web platforms in React and modern JavaScript, from design specification to shipped UI.
- Plan features with cross-functional teammates, review code, and iterate on the interface based on feedback.

Research Analyst — Eagle Badger Consulting — March 2025 – February 2026

- Turned unstructured data into clear reports and client presentations, and worked with stakeholders to turn findings into recommendations. This built the requirements-gathering skills I now apply to product work.

Frontend Developer — TechPreneur — June 2023 – May 2024

- Built and maintained responsive user interfaces, turning designer mockups into working components alongside designers and backend engineers, and fixed UI issues raised by QA and user feedback.

FEATURED PROJECTS

FusionLearn — Online learning platform (React, TypeScript) — Live Demo GitHub

- Course search, enrolment, lesson progress, timed quizzes, achievements and a Chart.js progress dashboard.
- State lives in one reducer with validated LocalStorage, so progress survives reloads. 77 automated tests.

ShopFlow — E-commerce storefront (React, TypeScript) — Live Demo GitHub

- Live REST API data with error handling, search, filters and sorting; cart persists in LocalStorage.
- Checkout form validated with React Hook Form and Zod. 27 automated tests.

CareerTrack — Job application tracker (React, TypeScript) — Live Demo GitHub

- Full CRUD with a validated form, real-time search, filters, sorting, interview-rate dashboard and dark mode.
- Reducer-based state with validated LocalStorage. 42 automated tests.

InsightBoard — SaaS analytics dashboard (React, TypeScript) — Live Demo GitHub

- Responsive dashboard with Chart.js charts, a searchable orders table, notifications and a validated settings form.
- Light and dark themes that the charts follow, saved in LocalStorage. 40 automated tests.

EDUCATION

Bachelor of Engineering, Mechanical Engineering — University of Benin — 2021

CERTIFICATIONS

Simplilearn: Full Stack Development (2026) • Introduction to Figma (2026) • Git Training (2026) • ReactJS Projects (2025)

VOLUNTEER

Shepherd App (church technology initiative): self-directed volunteer on a team designing an AI-assisted church platform with five tools: scripture and lyric projection, worship planning, sermon repurposing for social media, a congregation engagement hub, and an AI design generator.
